

ASSIGNMENT (TEST)

Objective

To demonstrate the student's knowledge in web development through a real-world implementation of a portfolio website.

Tasks description

Develop the below mockup website portfolio using HTML5, CSS/SCSS/SASS, Javascript(where possible) **without using any library or any plugin**; ensure that **navigation to different pages is possible**. Push the project to **Github** every **1h** when working on the project and create different branches to **show progress** and to show the ability to change between **branches** and the use of commands like **checkout** and **merge, etc...** and **deploy** your website on **Github**.

Notes:

- * Create a Github account with your Expolearn student email provided and push your assignment to the Expotech industries student repository file.
- * Choose your styles and animation and use your picture in the photo area
- * Create a minimum of 3 branches on Github.
- * Do your best possible and google when necessary for anything.
- * Do not use any library or plugin or fonts.
- * Put any content you like on other pages that are on the navigation bar.

- * **Do not limit yourself to the above tasks. Show all your web development skills**
